# Introducing Visium HD

The spatial discovery power you want with the resolution and data quality you need

## Unparalleled Spatial Discovery

Whole transcriptome gene expression analysis

## Resolved at Single Cell Scale

Capture Area with continuous lawn of 2 x 2  $\mu\text{m}$  barcoded squares

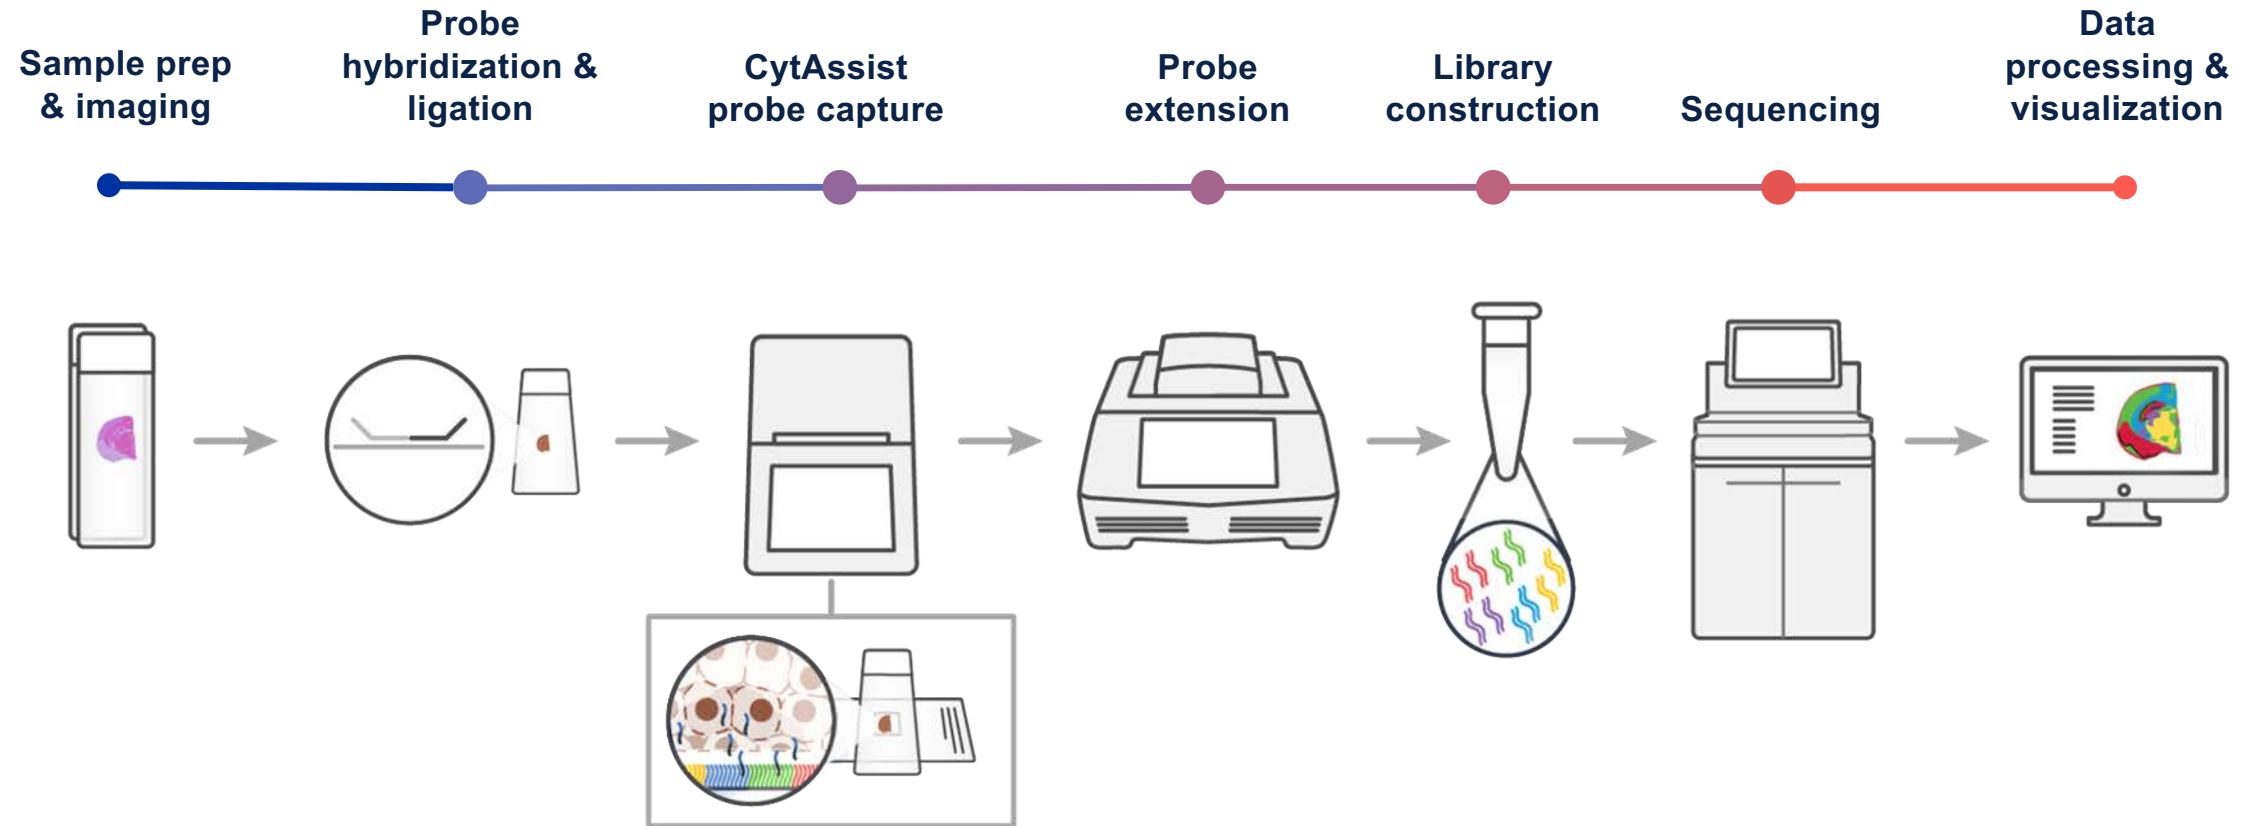

## Data Quality You Can Trust

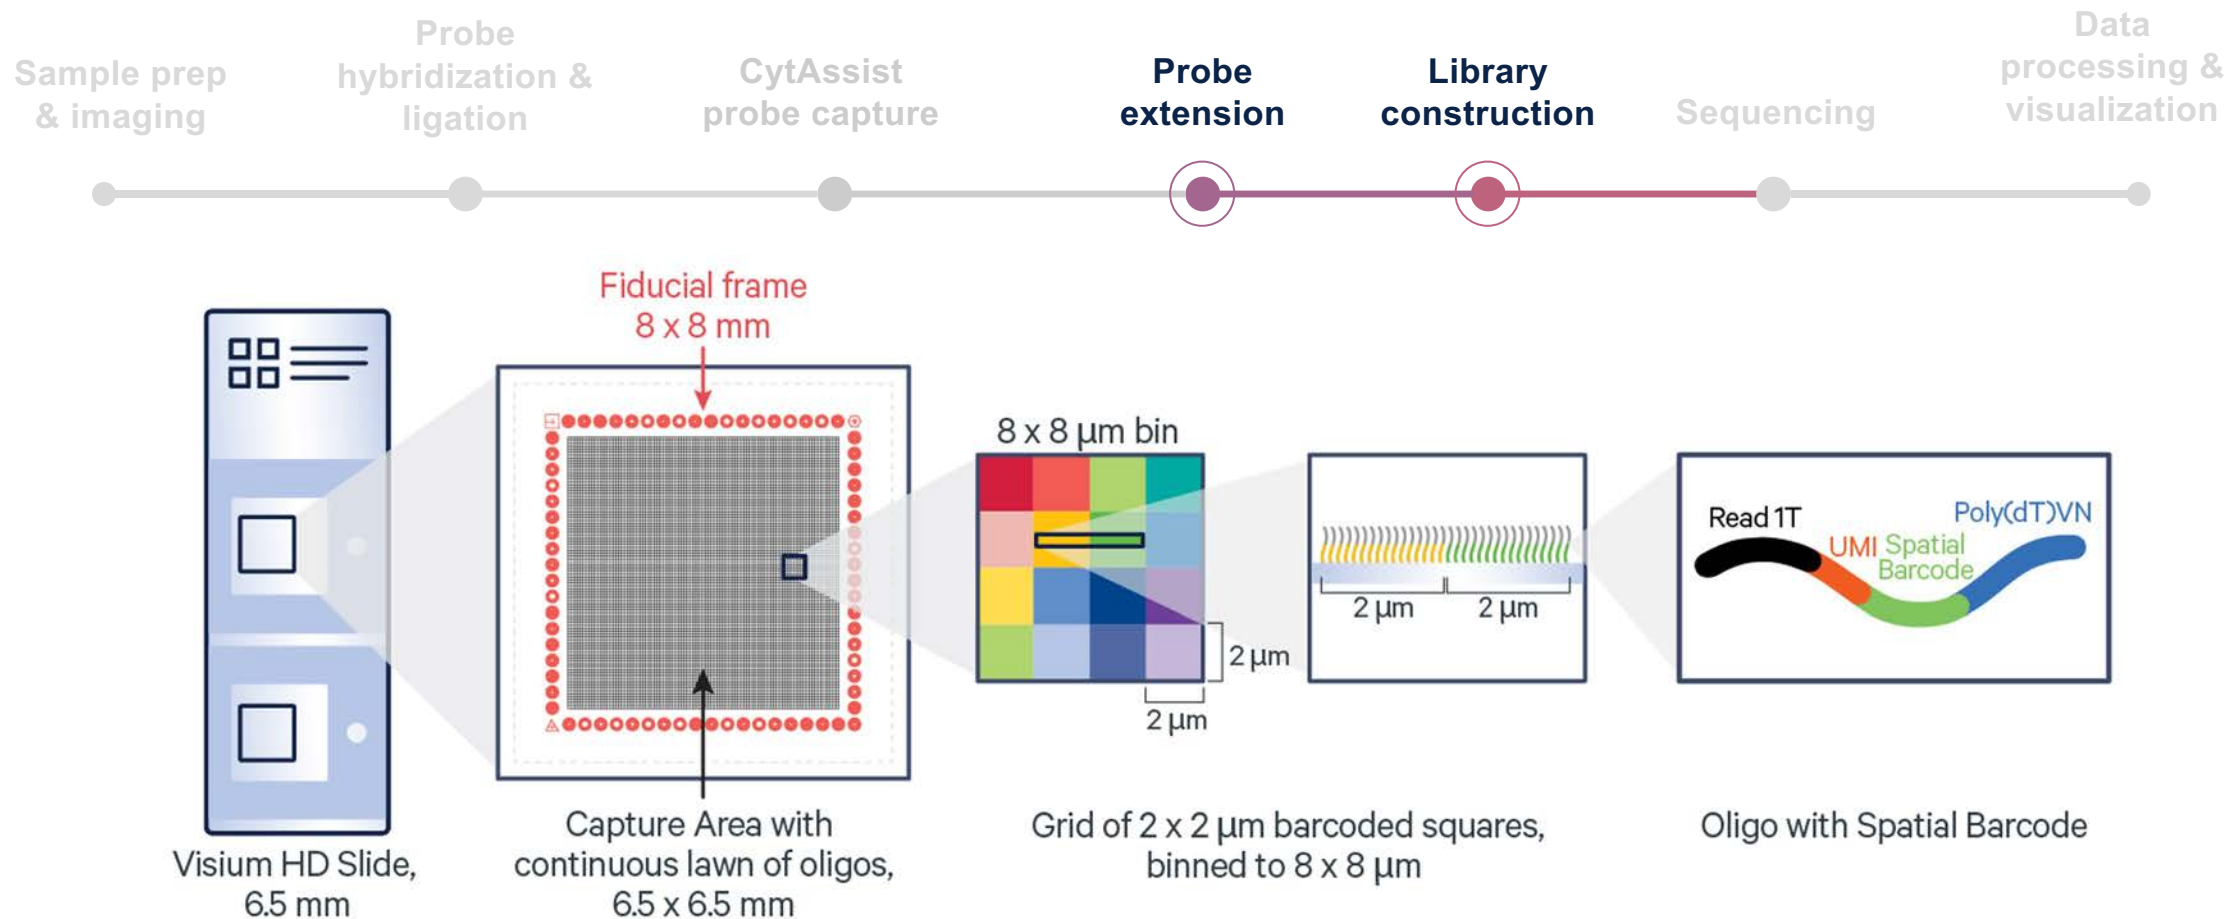

Accurate transcript localization enabled by Visium CytAssist

# Visium HD Workflow Powered by CytAssist

Transforming standard histological sections into high-resolution, whole transcriptome gene expression data

# Resolved at Single Cell Scale

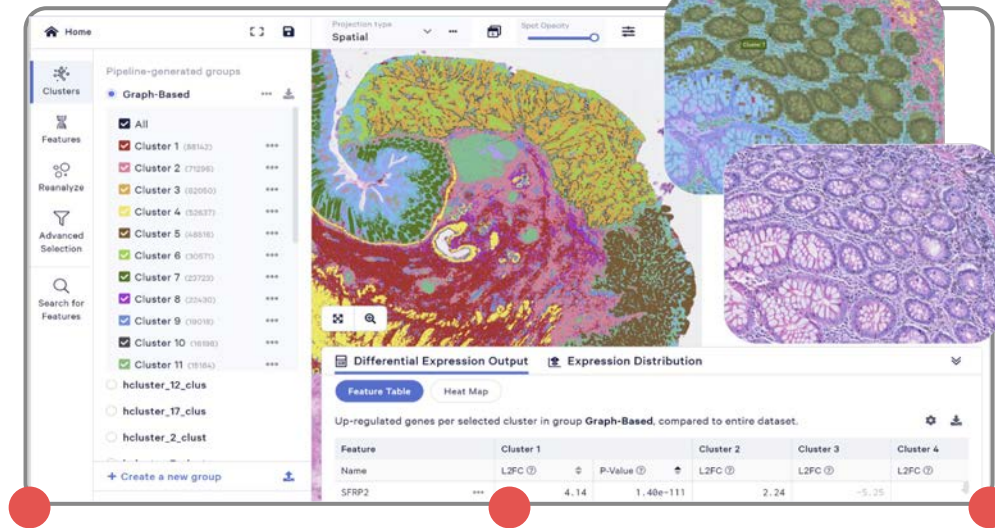

Data is output at 2 μm and multiple bin sizes. The 8 μm bin is a recommended starting point for visualization and analysis.

# Streamlined, Easy-to-Integrate Data Analysis

Sequencing Rec: 275M+ reads for a fully covered 6.5 mm Capture Area

Explore data in 10x-developed Loupe Browser

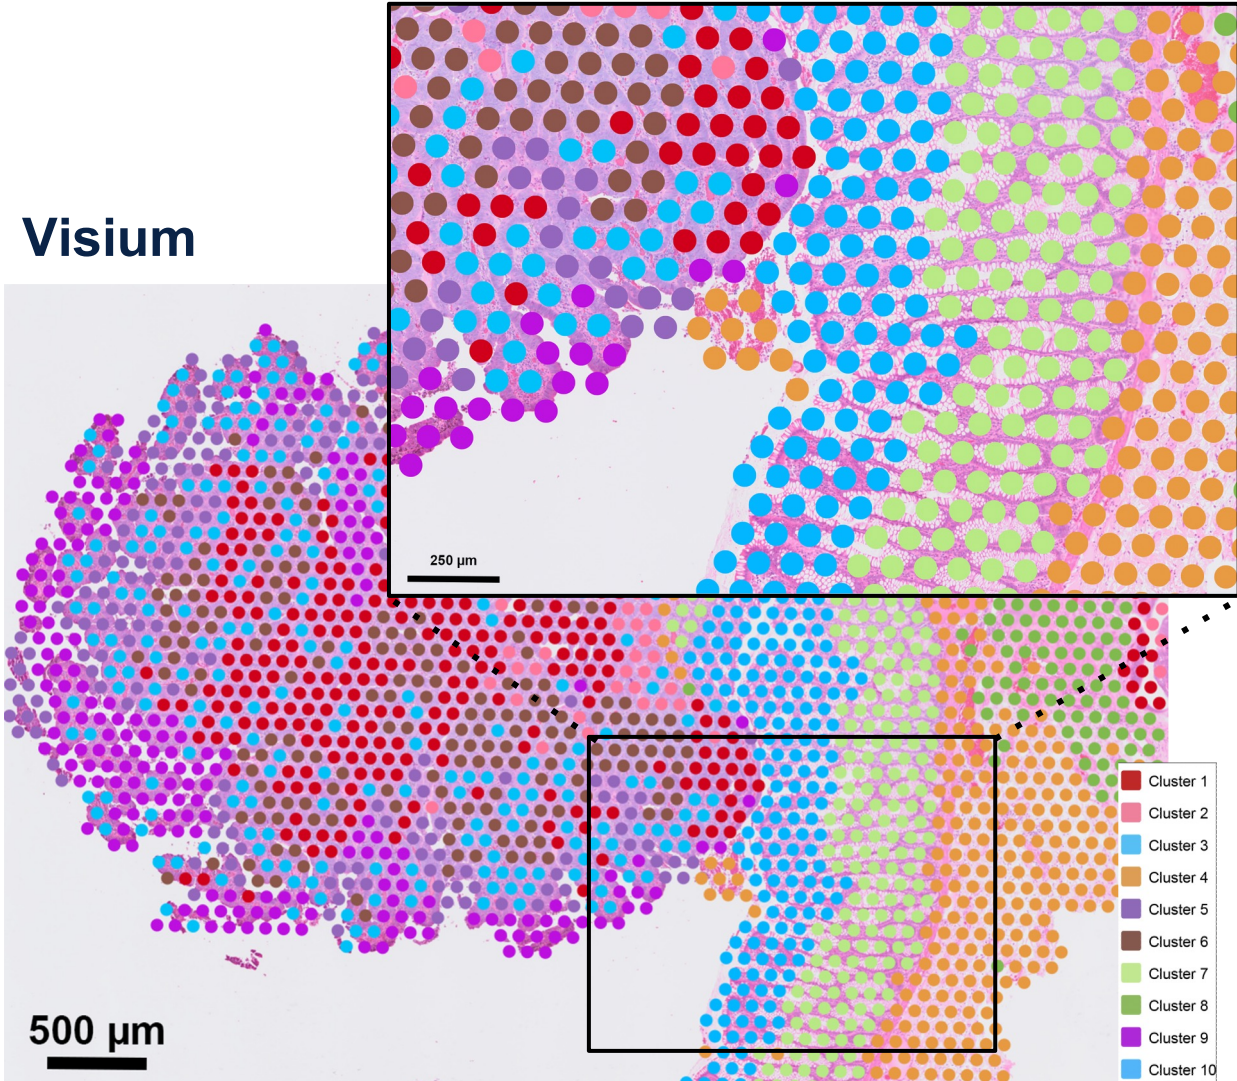

Data output at multiple bin levels: 2  $\mu$ m, 8  $\mu$ m (Loupe file provided), 16  $\mu$ m

Flexible binning in increments of 2  $\mu$ m

# Easy-to-Use Analysis Accelerates Discovery

# Visium HD identifies tumor regions with high resolution

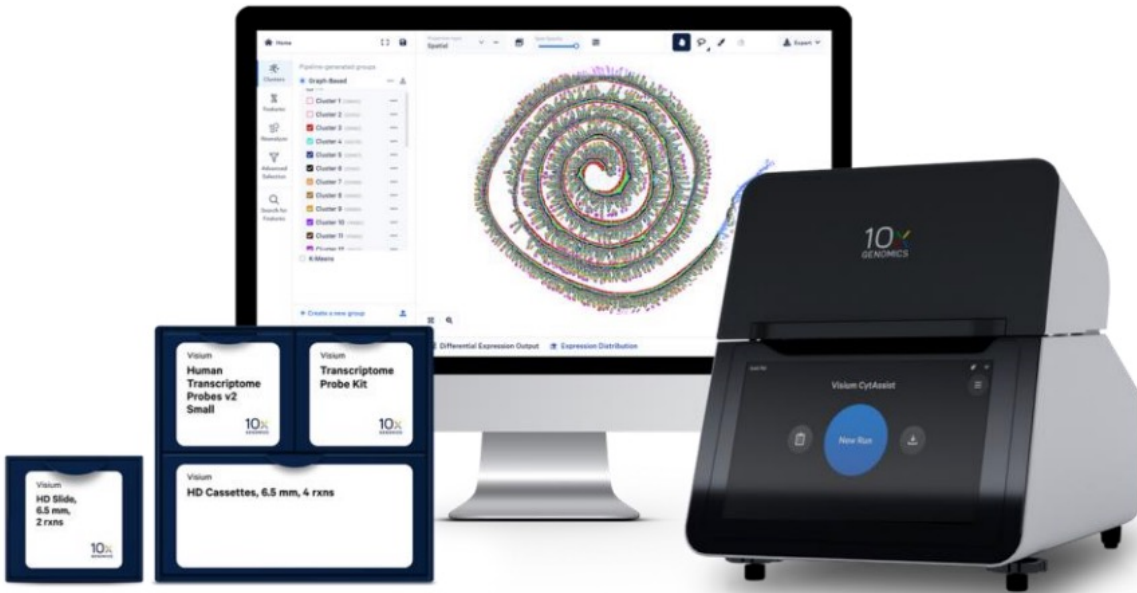

Unsupervised clustering

Tumor deconvolution using scRNA-seq

# Order Today: Visium HD Shipping This Quarter

- **Unparalleled spatial discovery:** Whole transcriptome gene expression analysis
- **Resolved at single cell scale:** Capture Area with grid-patterned 2 x 2  $\mu\text{m}$  barcoded squares
- **High data quality:** Precise instrument-driven probe capture
- **Broad access to diverse tissues:** Archived or newly sectioned FFPE with no optimization required
- **Compatible with histology workflows:** H&E or IF on the same section

**Xenium**  
*in situ*

# Before Xenium Workflow

Simple and robust benchtop workflow with only ~4 hours hands on time

Section tissue onto  
12 mm x 24 mm  
area

DNA probes hybridized  
to target RNA

Highly specific ligation

Multiple copies of  
barcode generated

# Onboard analysis includes in-line decoding

Achieves precise X,Y,Z localization of transcripts with reliable quality

## Chemistry and Imaging

Fluorescent oligos hybridize to amplified probes

Multiple cycles of probe binding and stripping

## In-line decoding

Cycle:	01	02	03	04	...	n
Gene 1						
Gene 2						
Gene 3						
⋮						

Onboard analysis decodes fluorescent signal across cycles to transcripts

# Large FFPE Human Breast Cancer Section With ~1M Cells

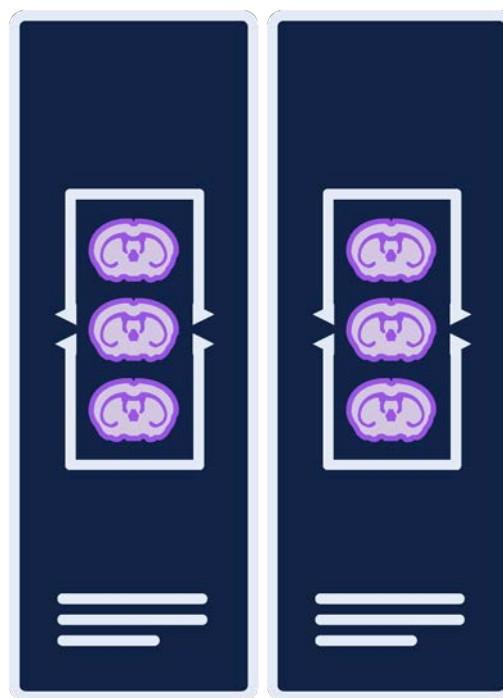

# Leading analyzable area allows for **maximum flexibility**

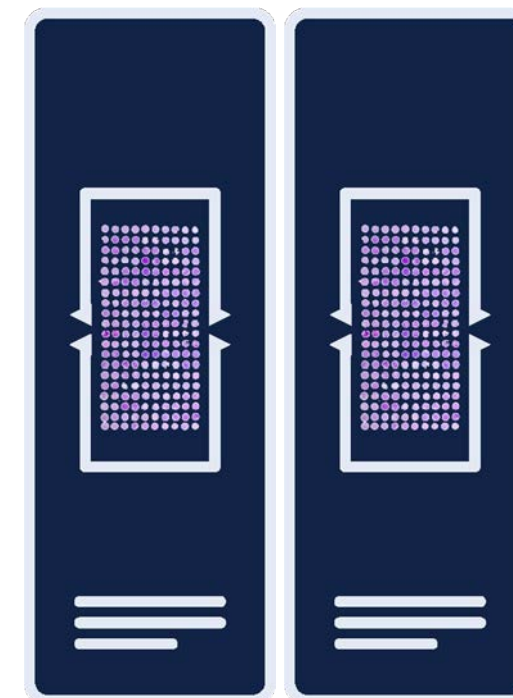

Two 10.5 x 22.5mm sections

**~2M cells**

Six 6 x 10mm mouse brain sections

**~1M cells**

~Four hundred 1 x 0.6mm biopsies in TMAs

**~1M cells**

# Xenium Panel and Custom Menu Offers Maximum Flexibility

## Pre-designed & validated panels

 **Human Breast**  
280 genes

**Human Multi-Tissue & Cancer**  
377 genes

 **Human Lung**  
289 genes

**Human Colon**  
322 genes

 **Human Brain**  
266 genes

**Mouse Brain**  
248 genes

 **Human Skin**  
260 genes

**Mouse Multi-Tissue**  
379 genes

**Add up to  
100 custom  
targets**

## Standalone custom

480 custom genes

300 custom genes

100 custom genes

50 custom genes

# Xenium Leaves Tissue Morphology Intact

Gain additional insights from the same tissue section post run

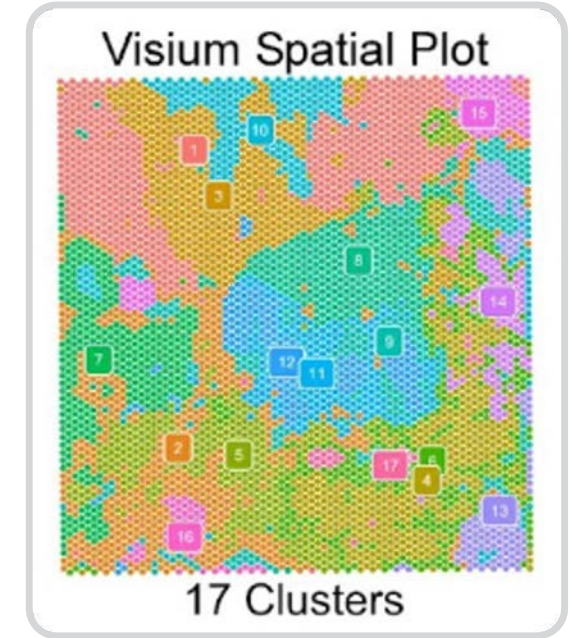

## H&E staining

## IF staining

## Visium via CytAssist

*These compatible workflows are done off Xenium Analyzer instrument. These use cases have worked well for the limited number of samples run at 10x and are not formally supported.*

# IF staining Post-Xenium is feasible on FF and FFPE samples

FF mBrain

FFPE hBreast

# Running Visium Cytassist on the Same Xenium Assay Slide

Human FFPE breast infiltrative ductal carcinoma

# Increased Plexity and Integrated Protein Coming to Xenium

**Multimodal Segmentation**  
Broad compatibility

**Shipping Q1**

**~5000 Plex Panels**  
~6 day run  
High quality data

**Q2 2024**

**In-line Multiplex Protein**  
Same slide as RNA

**H2 2024**

**1000-2000 Plex Panels**  
Offers more flexibility

**2024 +**

Final product release timelines and configurations subject to change

# Xenium multi-tissue stain-based cell segmentation improves cell delineation across different tissue types

# Xenium 5,000-plex will provide unmatched performance

Broad technology improvements enabling massive codebook expansion

## 5,000-plex

- Improved chemistry to allow for higher density and large codebook
- Maintains high per-gene sensitivity
- Dilution of high-expressing genes
- Practical to run in 1 working week

4 cm<sup>2</sup>  
in  
6 days

# Xenium 5,000-plex assay detects a wide range of cell types in lung adenocarcinoma

Cells detected	289K
Median transcripts/cell	393
Transcripts per 100 $\mu\text{m}^2$	877
False discovery rate	0.6%
Total high-quality transcripts	231M
DV200	39

# High-plexity RNA and protein profiling in the same Xenium run

**ONE**  
instrument run

**ONE**  
sample

**TWO**  
complementary  
readouts

- Menu of oligo-conjugated antibodies for seamless multiplexing on instrument
- Unified workflow for integrated RNA + protein profiling
- Validated, pre-titrated protein panels for ease of use

# Simultaneous 20-plex protein + 1,000-plex RNA

CD45RA (Naive B & T cells) + PD-1 (T cells) + CD8A (Cytotoxic T cells) + PCNA (Proliferation)

# Simultaneous 20-plex protein + 1,000-plex RNA

RNA-assigned cluster labels

# Unlock the Full Spectrum of Spatial Biology

## Visium HD is Unbiased Discovery

- Whole transcriptome
- Sequencing based
- Transcripts assigned to multi-micron areas

## Xenium is Precision Insights

- 100s–1000s of transcripts
- High-resolution imaging based
- Transcripts assigned to cells

**Chromium**

**Visium**

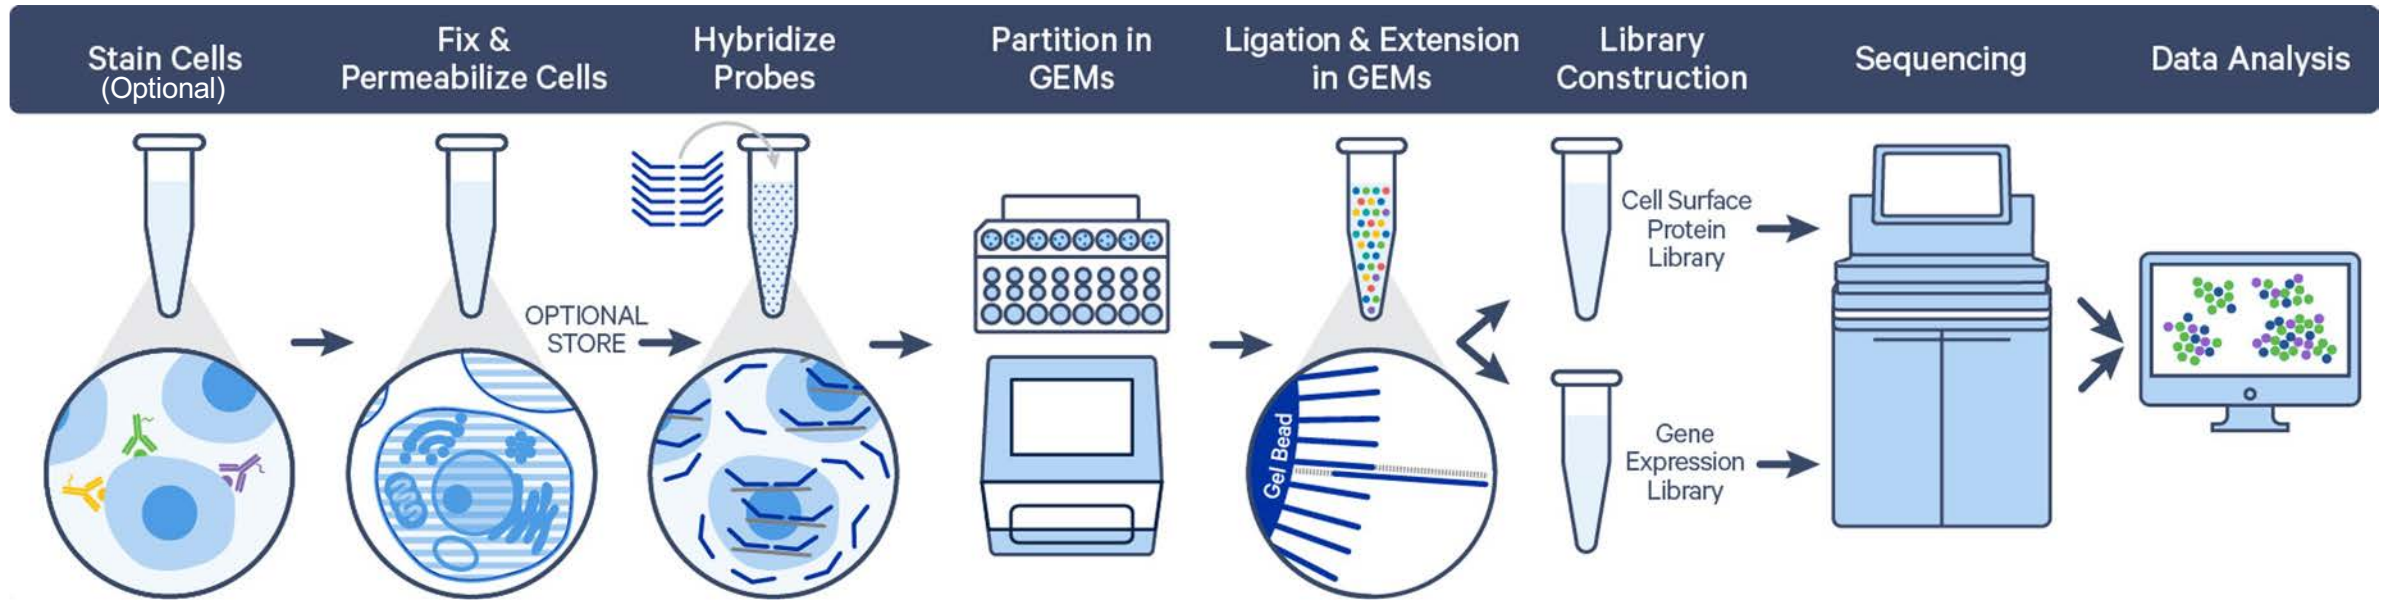

# Toolkit

**Xenium**

# Single Cell Gene Expression Flex – A Streamlined Workflow

- Sensitive, probe-based **whole transcriptome assay**
- Assay compatible with Feature Barcode technology for **profiling cell surface proteins** (with TotalSeq™-C antibodies)
- Does not depend on polyA capture; covers more than 18,000 human or mouse genes

# Gene Expression Flex supports FFPE tissues

## Two robust methods for FFPE dissociation

- We are providing **two methods** for FFPE tissue dissociation, as described in [Demonstrated Protocol](#) (CG000632)
  - Instrument-based workflow with the gentleMACS™ Octo Dissociator
  - Manual workflow with a pestle
- Appendix provides additional guidance regarding:
  - Cell counting recommendations
  - Cell yields derived from >20 samples with section thickness and cross-section size
- Each method has been extensively tested with the tissues listed below

### HUMAN

Brain (healthy, Alzheimer's, glioblastoma)	Liver (cancer, healthy)
Breast cancer	Pancreas
Colorectal cancer	Prostate cancer
Heart	Skin melanoma
Kidney	Testis
Lung (cancer, healthy)	Thymus
Ovarian cancer	Tonsil
Lymph Node (reactive, healthy)	Spleen

### MOUSE

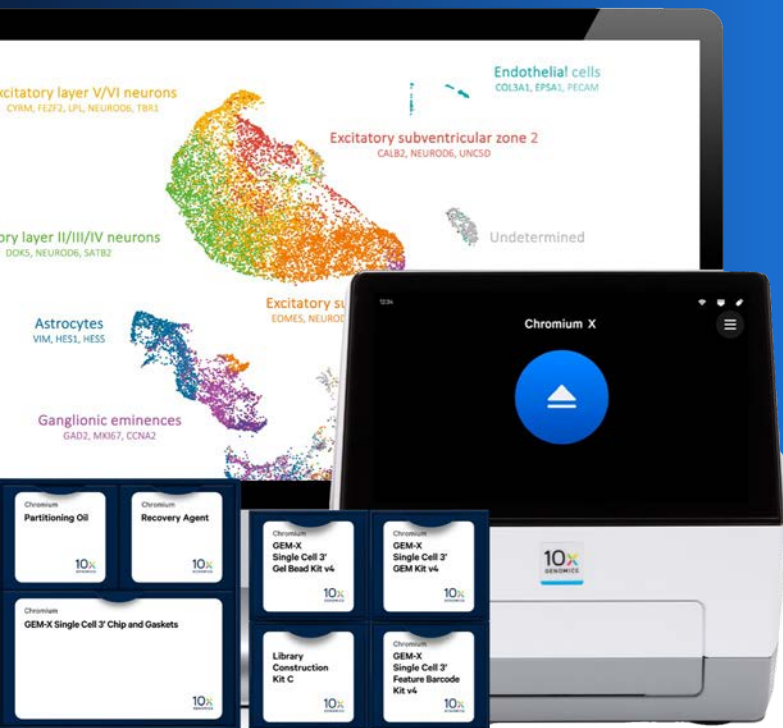

Brain (cerebellum, cortex, hippocampus)
Heart
Kidney
Liver
Spleen
Thymus

# Introducing the Next Generation Single Cell Solutions

New versions of 3' and 5'

- **Efficient partitioning:** tens of thousands of cells in 6 minutes
- **Built to scale:** 500–20K cells per channel, for up to 160K cells per run, run up to 8 samples in parallel
- **Cell size flexibility:** no lower limits
- **High cell capture rates:** up to 80% cell recovery
- **Low doublet rates:** 0.4% per 1,000 cells
- **Instrument compatibility:** Chromium X series

- Powered by **GEM-X Technology**
